

WOMAN'S TONGUE TREE

Albizia lebbbeck

Fabaceae

ECHO® ENFOMASYON PLANT

Deskripsyon

A fast growing nitrogen-fixing deciduous tree, recommended for reforestation and firewood plantations. *Albizia lebbbeck* reaches an average height of 6-12 m but may reach 25-30 m with a dense shade-producing crown. Handles coppicing well. Bark smooth, light white or greenish gray. The pods are flat, reddish brown, with seeds that rattle in the breeze. This tree is native to tropical Africa, Asia and northern Australia.

Itilite

Albizia lebbbeck wood is termite-resistant and can be used for furniture, veneer, turnery, general construction, carts, carving, firewood, and charcoal. The tree can be planted for shade, erosion control and as an ornamental. In India it is commonly found as a cover crop in tea and coffee plantations. Leaves can be used as green manure. It is a suitable fodder crop for domestic and wild animals. In addition, the bark contains saponin used in soap making and tannin used for tanning leather and treating fishnets. In the Sudan, goats eat fallen leaves and flowers.
